

American Roulette

Step 1: Getting Started

1. Choose your bet from the selection of chips on screen.
2. To place your chip(s) on the table, touch on the square(s) on the table containing the number(s) you wish to bet on. For example, to bet on the number 32, place a chip in the middle of the '32' square on the table.
3. You may place as many chips as you like on each bet area, up to the table limit for that bet type.

Step 2: How To Play

- You may place as many chips as you like on each bet area, up to the table limit for that bet type.
- To place a Split bet or Corner bet, ie. where a single bet is split between two - four numbers on the table, place your chip in the appropriate position, so that it is over the line or corner between the two - four numbers in question.
- You may choose different stake amounts for each of your bets - just select a new chip value or place multiple chips on each bet area.
- The total amount you have staked will be shown in the 'Total Bet' box at the bottom of the screen.
- Press 'UNDO' to undo your last action - so if you placed a chip on the table, 'UNDO' will remove it, or if you have just pressed 'REBET' then 'UNDO' will remove those chips you just added.
- If you change your mind and want to start again, press 'CLEAR' to remove all chips from the table.
- Once you are happy with your bets, press 'SPIN' to play the game. Once you have pressed 'SPIN', you cannot cancel your bets.
- When the ball stops and the result is known, a marker will indicate the winning number. All chips apart from the winning bet will be cleared from the table before your winnings are credited to your account balance.

Payout Information and Game Rules

- **MALFUNCTION VOIDS ALL PLAYS AND PAYS.**
- **If your game is terminated or the internet connection is lost during play and your bet was accepted, it will be settled accordingly. Please contact Customer Services to check the result of your spin.**
